

We Like GWT, we think you will too!

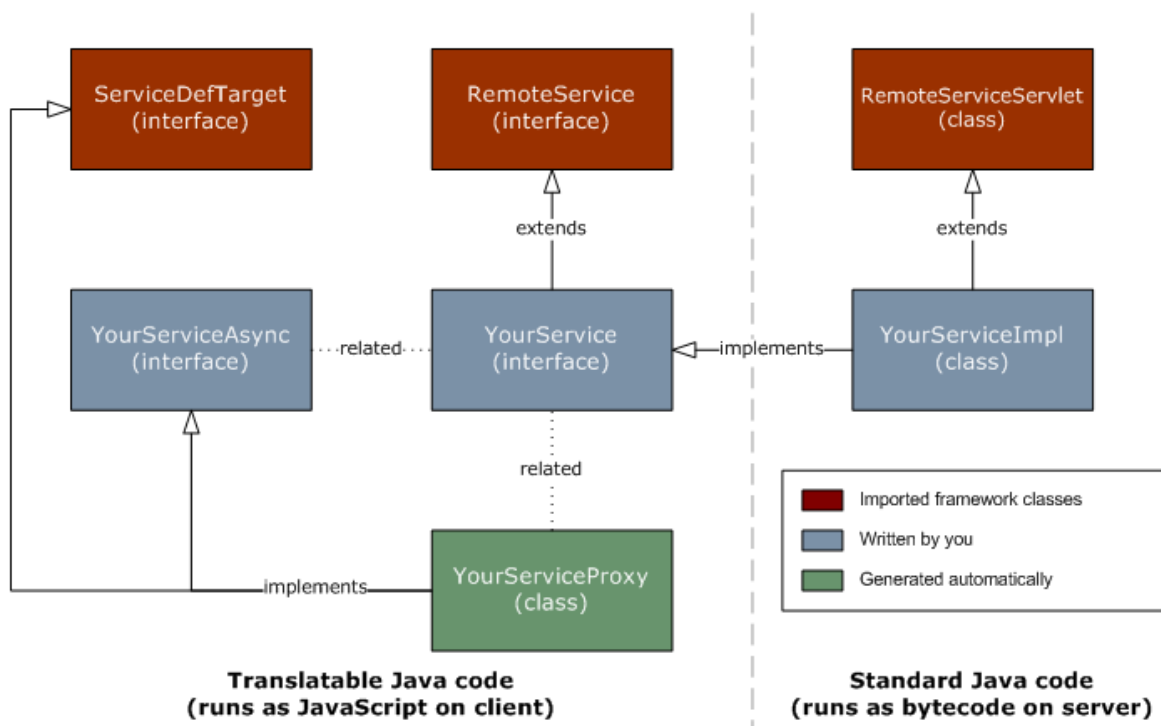

Getting set up.

NOTE - MacBook Air users, unlucky, you can boot our presentation unless you have an external CD.

Hi there - take the USB drive or CD provided and insert it into your laptop. Reboot your machine and open the BIOS boot menu (usually something like F1, F8 or F12). Choose to boot from the USB port or CD then :

1. Choose to '**Try Ubuntu without Installing**' - please don't choose anything else!
2. Choose English, and wait for Ubuntu to boot.
3. Open the APPS mounted drive, and run '**start.sh**' by double clicking and choosing either **Run** or **Run in Terminal**.

GWT RPC Diagram

The flow of the RPC process :

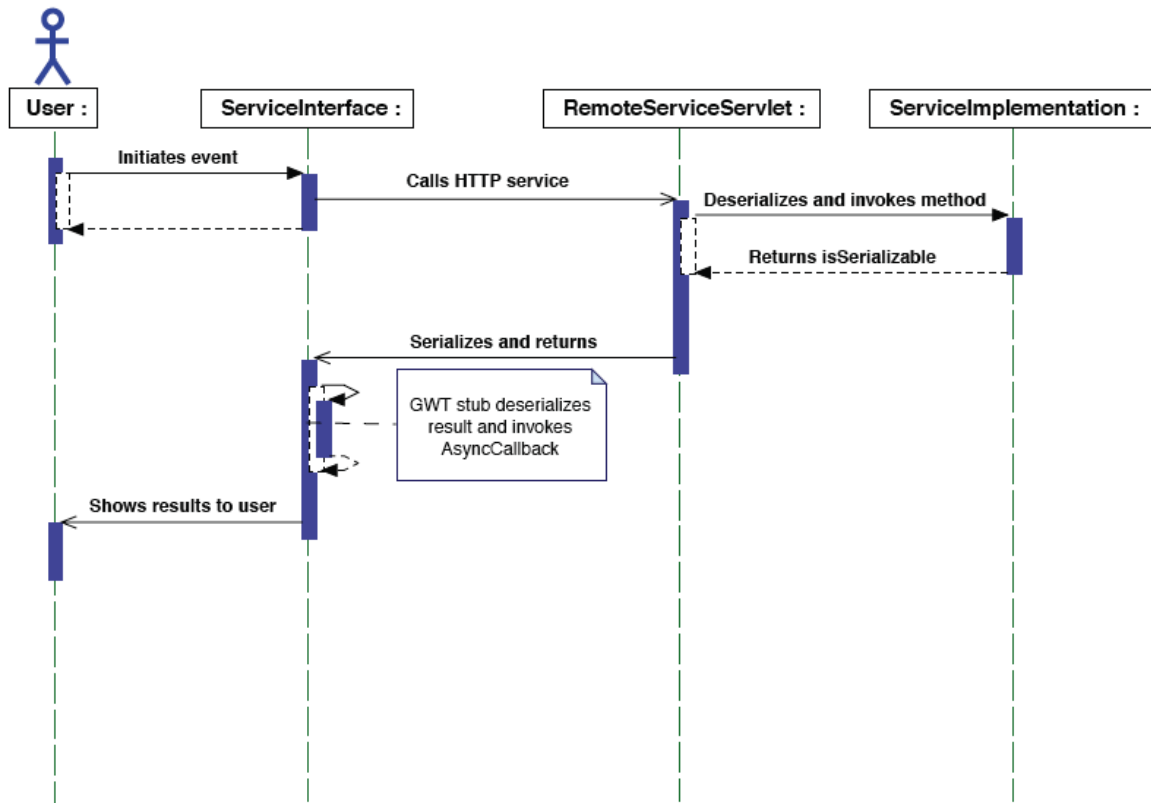

Figure 3.4 An overview of the complete RPC process. Notice that the user's browser lifeline is freed while the service call is executed; it's monopolized again as the call is returned.

MegaTrade Stories

- Display account number & P&L.
 - Display current holdings.
 - Add a way to refresh the prices.
 - Add profit as a percentage per holding.
 - Show negative profit holdings in red, otherwise in green.
 - Make the prices auto-refresh (see Timer).
 - Add a way to sell the holding.
- Add images to show if the price changed positively or negatively.

Some GWT Client side things

Button

```
Button button = new Button("Do Something");
button.addClickListener(new ClickListener() {
    public void onClick(Widget sender) {
        //do something
    }
});
```

```
    }  
}
```

FlowPanel

```
FlowPanel panel = new FlowPanel();  
panel.add(new Label("Hello"));  
panel.add(new Label("World"));
```

FlexTable

```
FlexTable table = new FlexTable();  
table.setWidget(0, 0, new Label("Eee"));  
table.setText(0, 1, "by gum");  
table.getRowFormatter().setStylePrimaryName(0, "row-zero-css-class");
```

Timer

```
Timer timer = new Timer() {  
    public void run() {  
        //do something.  
    }  
}  
timer.scheduleRepeating(1000);
```
